SUBJECT: BOTANY

Subject prerequisites:

To study Botany, a student must have had the subject Biology/Biotechnology learnt at 10+2 level.

COURSE INTRODUCTION

The new curriculum of B.Sc. in Science (Botany) offers essential knowledge and technical skills to study plants in a holistic manner. Students would be trained in all areas of plant biology using unique combination of core, elective and vocational papers with significant inter-disciplinary components.

Students would be exposed to cutting-edge technologies that are currently used in the study of plant life forms, their evolution and interactions with other organisms within the ecosystem. Students would also become aware of the social and environmental significance of plants and their relevance to the national economy.

B.Sc. Botany program covers academic activities within the classroom sessions along with practical concepts at laboratory sessions. Infield, outstation activities and projects are also required to be organized for real-life experience and learning.

Candidates who have curiosity in plants kingdom, ecosystem, love exploring exotic places and wish to work as researchers or professions like Botanist, Conservationist, Ecologist, etc. can choose B.Sc. Botany course.

Program outcomes (POs):

and their domestication.

Transformed curriculum shall develop educated outcome-oriented candidature, fostered with discovery-learning, equipped with practice & skills to deal practical problems and versed with recent pedagogical trends in education including e-learning, flipped class and hybrid learning to develop into responsible citizen for nation-building and transforming the country towards the future with their knowledge gained in the field of plant science.

CBCS syllabus with a combination of general and specialized education shall introduce the **PO 1** concepts of breadth and depth in learning PO₂ Shall produce competent plant biologists who can employ and implement their gained knowledge in basic and applied aspects that will profoundly influence the prevailing paradigm of agriculture, industry, healthcare and environment to provide sustainable development. PO₃ Will increase the ability of critical thinking, development of scientific attitude, handling of problems and generating solution, improve practical skills, enhance communication skill, social interaction, increase awareness in judicious use of plant resources by recognizing the ethical value system. **PO 4** The training provided to the students will make them competent enough for doing jobs in Govt. and private sectors of academia, research and industry along with graduate preparation for national as well as international competitive examinations, especially UGC-CSIR NET, UPSC Civil Services Examination, IFS, NSC, FCI, BSI, FRI etc. Certificate and diploma courses are framed to generate self- entrepreneurship and self-**PO 5** employability, if multi-exit option is opted. Lifelong learning be achieved by drawing attention to the vast world of knowledge of plants **PO 6**

Programme specific outcomes (PSOs): B.Sc. I Year / Certificate course in Microbial Technology & Classical Botany

This Programme imparts knowledge on various fields of plant biology through teaching, interactions and practical classes. It shall maintain a balance between the traditional botany and modern science for shifting it towards the frontier areas of plant sciences with applied approach. This syllabus has been drafted to enable the learners to prepare them for self-entrepreneurship and employment in various fields including academics as well as competitive exams. Students would gain wide knowledge in following aspects:

- 1. Diversity of plants and microbes their habitat, morphology, architecture and reproduction.
- 2. Plant disease causing microbes, symptoms &control.
- 3. Economic value of plants and their use in Human Welfare.

Programme specific outcomes (PSOs):

B.Sc. II Year/ (Diploma in Plant Identification, Utilization & Ethnomedicine)

This course provides a broad understanding of identifying, growing and using plants. This course is primarily aimed to introduce people to the richness of plant diversity found in surrounding areas. Lecture sessions are designed to cover fundamental topics concerning classification of plants and their utilization required for understanding the flora and vegetation. Practical sessions are organized following theory for easy understanding of the various parts of the plants, structural organization of floral parts and diversity therein. Participants are taken to different locations covering a variety of habitats and forest types to acquaint them with the native flora. in the long run, will contribute towards building momentum for people's participation in environmental conservation without compromising on academic rigor and our rich wealth of knowledge inherited over generations.

- 1. The course will cover conventional topics in Field Botany like Evolutionary History & Diversity of Plants, Complete Morphology, Nomenclature of plants, Systems of Classification, Keys to Important Families of Flowering Plants, Field Data Collection & Herbarium Techniques.
- 2. The course is designed to become a commercial crop grower, florist, protected cultivator, green belt plant advisor to industries, pharmacologist & taxonomist.

Programme specific outcomes (PSOs): B.Sc. III Year / Bachelor of Science

The learning outcomes of three years graduation course are aligned with program learning outcomes but these are specific to-specific courses offered in a program. The core courses shall be the backbone of this framework whereas discipline electives, generic electives and skill enhancement courses would add academic excellence in the subject together with multi-dimensional and multidisciplinary approach.

- 1. Understanding of plant classification systematics, evolution, ecology, developmental biology, physiology, biochemistry, plant interactions with microbes and insects, morphology, anatomy, reproduction, genetics and molecular biology of various life-forms.
- 2. This course is suitable to produce expertise in conservation biology like ex-situ conservation, response to habitat change, genotype characterization and reproductive biology.
- 3. Understanding of various analytical techniques of plant sciences, use of plants as industrial resources or as human livelihood support system and is well versed with the use of transgenic technologies for basic and applied research in plants.

- **4.** Understanding of various life forms of plants, morphology, anatomy, reproduction, genetics, microbiology, molecular biology, recombinant DNA technology, transgenic technology and use of bioinformatics tools and databases and the application of statistics to biological data.
- **5.** Entrepreneurship Skill Development, Understand the issues of environmental contexts and sustainable development, Inculcation of human values,
- **6.** Strengthen mathematical and computational skills. Enable students to use ICT&AI effectively.
- **7.** Develop good skills in laboratory such as observation and evaluation by the use of modern tools and technology.

PSO 1	Understanding the nature and basic concepts of all the plant groups, their metabolism, components at the molecular level, biochemistry, taxonomy and ecology. The course will make them aware of natural resources and environment and the importance of conserving it. Hands on training in various fields will develop practical skills, handling equipment's and laboratory use along with collection and interpretation of biological materials and data. Knowledge gained through theoretical and lab-based experiments will generate technical personnel in various priority areas such as genetics, cell and molecular biology, plant systematics and biotechnology.
PSO 2	Botanists are able to contribute to all these fields and therefore, are mainly employed with educational institutions, government or public sectors or companies in industries, such as agriculture or forestry, oil, chemical, biotechnology, geological survey, environmental protection, drugs, genetic research, plant resources laboratories, planthealth inspection services, lumber and paper, food, fermentation, nursery, fruit and so on. Jobs available as a botanist: •Microbiologist, plant pathologist, Taxonomist • Plant Physiologist • Plant Biochemist • Researcher • Mycologist • Ecologist • Weed Scientist • Palaeobotanist • Conservationist • Fruit Grower • Morphologist • Cytologist • Ethnobotanist • Plant geneticists etc.
PSO 3	Inculcating strong fundamentals on modern and classical aspects of Botany, understanding knowledge of Botany is an essential pre-requisite for the pursuit of many applied sciences. It will facilitate students taking up and shaping a successful career in Botany and allied sciences.
PSO 4	Introduction of research project will inculcate research aptitude and passion for higher education and scientific research.

	Degree in Bachelor of Science (Apprenticeship/ internship embedded) B.Sc IV year Programme Specific Outcomes (PSOs)		
PSO1	This program will equip students with the skills needed for the industry and provide opportunities to earn during their learning process.		
PSO2	The program will provide exposure to students to learn new skills from the real world of academia, industry, administration etc.		
PSO3	The Degree courses will enable students to go for higher studies like Masters (1 year's program) or Ph.D in Botany and allied subjects.		

	4 Year B.Sc (Honours)		
	B.Sc IV year Programme Specific Outcomes (PSOs)		
PSO1	After completion of the program students have better knowledge about applied microbiology, and plant pathology. They will be able to understand new frontiers of plant science and well versed with modern instrumentation techniques which have industrial as well as academic implications. The knowledge of landscaping and floriculture helps them to create self-employment opportunities.		
PSO2	Students having knowledge of environmental concerns, related ethics, importance of conservation and will contribute to achieving sustainable development goal of earth.		
PSQ3	After the completion of the program the students will be able to design and conduct field exploration tour. They know the methodologies of data collection, data analysis and how to present data. The skills mentioned will create job opportunities for them especially in departments related to forest, biodiversity etc.		

	4 Year B.Sc (Honors with Research)			
	B.Sc IV year Programme Specific Outcomes (PSOs)			
PSO1	Students having knowledge of applied aspects of microbiology, plant pathology, plant systematics and instruments and techniques.			
PSO 2	After the completion of the program the students will be able to design and conduct field exploration tour. They know the methodologies of data collection, data analysis and how to present data. The skills mentioned will create job opportunities for them, especially in departments related to forest, biodiversity etc.			
PSO 3	Manpower with research skill and aptitude.			
PSO 4	The Degree courses will enable students to go for higher studies like Masters (1 year's program) or Ph.D in Botany and Allied subjects.			

Kapilvastu, Siddharth Nagar (UP)- 272202

Course for B.Sc. -I Semester (Botany) Paper-I

Course Title: MICROBIOLOGY AND PLANT PATHOLOGY (UG Honors)

Course Code: B040101T

Credit Units: 4 Level: UG

Course Objectives: Gain knowledge about uses of

Credit Distribution of the course				
Lecture (L) Tutorial (T) Practical (P)				
04	-	-		

microbes in various fields such as mushroom cultivation and lichen application.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of
	lectures/Teaching
	Hours (60)
Unit I: Introduction to Ancient Indian Microbial Techniques & Instrumentation	8
Introduction to ancient Indian, Vedic, and heritage botany. Contribution of Indian botanists, in context with the holistic development of modern science and technology, must be taught, practiced, and assessed via class interaction/assignments/self-study mentioned under Continuous Internal Evaluation (CIE).	
Microbial Techniques & Instrumentation: Microscopy—Light, phase contrast & electron microscopy, staining techniques for light microscopy, common equipment of microbiology labs (autoclave, oven, laminar air flow, centrifuge) and the principle of their working.	
Unit II: Microbial World	8
Cell structure of eukaryotic and prokaryotic cell, Gram-positive and Gram-negative bacteria, Structure of a bacterium; Bacterial growth curve, Batch culture, Fed-batch culture, and Continuous culture; Sporulation, reproduction, and recombination in bacteria. Viruses, general characteristics, structure of viruses, bacteriophages, structure of λ-phage, lytic and lysogenic cycles, viroids, prions, mycoplasma & phytoplasma.	
Unit III: Phycology	8
Range of thallus organization, pigments, reserve food, reproduction in algae. Economic importance of algae. Classification (Fritsch, F. E.) and life cycle of—Scytonema, Nostoc, Volvox, Oedogonium, Chara, Sargassum, Ectocarpus, and Batrachospermum.	
Unit-IV: Mycology	8
General characteristics, nutrition, life cycle and classification of fungi (Alexopoulos and Mims) up to class. Economic importance of fungi. Distinguishing characters of following genera.	

Myxomycotina- <i>Physarum</i> ; Mastigomycotina- <i>Saprolegnia</i> ; Ascomycotina – <i>Penicillium</i> and <i>Peziza</i> ; Basidiomycotina- <i>Puccinia</i> and <i>Agaricus</i> ; Deuteromycotina – <i>Alternaria</i> . Mycotoxins, Heterothallism and Parasexuality.	
Unit-V: Mushroom Cultivation, Lichenology & Mycorrhiza	8
Mushroom cultivation. General account of lichens, reproduction, and significance. Mycorrhiza and their significance.	
Unit-VI: Plant Pathology	6
Disease concepts, symptoms, etiology, and Koch's postulates. Mechanism of infection, disease cycle. Defense mechanisms with special reference to phytoalexin and fungicides.	
Unit-VII: Diseases and Control	8
Symptoms, causal organism, disease cycle, and control measures of early & late blight of potato, brown spot of rice, red rot of sugarcane, stem gall of coriander, yellow vein mosaic of bhindi, citrus canker, little leaf of brinjal. Disease management: Quarantine and Biological. Integrated pest and disease management.	
Unit-VIII: Applied Microbiology	6
Food fermentation and food produced by microbes, production of antibiotics and alcoholic beverages. Plant growth promoting rhizobacteria (PGPR) and biopesticides— <i>Trichoderma</i> and <i>Pseudomonas</i> , single-cell proteins, production of biofuels, biodegradation of pollutants. Biofertilizers and their mass production.	

Course Outcomes: Develop understanding about the classification and diversity of different microbes, including viruses, algae, fungi, lichens and their economic importance. Understand the structure and reproduction of certain selected bacteria, algae, fungi, and lichens.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

The evaluation scheme and mode will be as per the guidelines notified by Siddharth University, Kapilvastu, Siddharth Nagar

of microbes in various fields.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics (Minimum any 02 from each unit depending on facilities)	Total no. of lectures/Teaching
(1. minum mi) v2 mem energen mem g en memore)	Hours (60)
Unit I: Instruments & Techniques	7
1. Laboratory safety and good laboratory practices.	
2. Principles and applications of laboratory instruments- microscope, incubator,	
autoclave, centrifuge, laminar air flow, filtration unit, shaker, and pH meter.	
3. Cleaning and sterilization of glassware.	
4. Preparation of nutrient media.	0
Unit II: Bacterial Identification	8
1. Isolation of bacteria.	
2. Staining techniques: Gram staining.	
3. Biochemical Characterization of bacteria; Urease test, nitrate reductase test,	
starch hydrolysis test, casein hydrolysis test.	
Unit III: Mycological Study	8
1. Isolation of different fungi: Saprophytic, Coprophilous, Keratinophilic.	
2. Identification of fungi by the lactophenol cotton blue method. <i>Rhizopus</i> , <i>Peziza</i> ,	
Saccharomyces, Penicillium, Ustilago, Puccinia, Fusarium, Curvularia, and	
Alternaria.	
3. Agaricus: Specimens of button stage and full-grown mushroom,	
sectioning through gills.	
4. Lichens: crustose, foliose, and fruticose specimens.	
Unit IV: Phycology	7
Study of thallus structure of following cyanobacteria and algae: Microcystis,	
Spirulina, Nostoc, Volvox, Oedogonium, Chara, Pinnularia and Sargassum.	
Unit V: Experimental plant pathology	8
1. Preparation of fungal media (PDA) and sterilization process.	

 Isolation of the pathogen from the diseased leaf. Identification: Pathological specimens of the brown spot of rice, bacterial blight of rice, loosesmut of wheat, stem rot of mustard, late blight of potato. Slides of uredial, telial, pycnial and aecial stages of <i>Puccinia</i>, viral and bacterial plant diseases. 	
Unit VI: Applied microbiology-I	8
1. Isolation of nitrogen-fixing bacteria from root nodules of legumes.	
2. Enumeration of the rhizosphere to the non-rhizosphere population of bacteria.	
3. Isolation of antagonistic <i>Pseudomonas</i> from soil.	
4. Microscopic observations of root colonization by VAM fungi.	
Unit VII: Applied microbiology-II	8
1. Isolation of lactic acid bacteria from curd.	
2. Isolation of lipolytic organisms from butter or cheese.	
3. Isolation and characterization of acidophilic, alkalophilic, and halophilic bacteria.	
Unit VIII: Industrial application	6
1. Cultivation of <i>Spirulina</i> and <i>Chlorella</i> in laboratory for biofuel.	
2. Visit to the biofertilizer and biopesticide unit to understand the Unit operation	
2. Visit to the biofertilizer and biopesticide unit to understand the Unit operation procedures.	
2. Visit to the biofertilizer and biopesticide unit to understand the Unit operation procedures.3. Mushroom cultivation for protein.	
2. Visit to the biofertilizer and biopesticide unit to understand the Unit operation procedures.

Course for B.Sc.-II Semester (Botany) Paper-I

Course Title: ARCHEGONIATES AND PLANT ARCHITECTURE (UG Honors)

Course Code: B040201T

Credit Units: 4 Level: UG

Course Objectives:

Credit Distribution of the course		
Lecture	Tutorial (T)	Practical (P)
(L)		
04	-	-

To understand the morphology, anatomy and reproductive biology of archegoniate and higher plants.

• To introduce about basic concepts of palaeobotany.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of
	lectures/Teaching
	Hours (60)
Unit I: Introduction to Archegoniates & Bryophytes	8
Study of silent features of archegoniates. General characteristics, classification of bryophytes (up to family; Proskauer,1957). Morphology, anatomy, and reproductive biology of <i>Riccia</i> , <i>Marchantia</i> , <i>Anthoceros</i> , and <i>Sphagnum</i> . (Developmental details not to be included). Economic importance of bryophytes.	
Unit II: Pteridophytes	8
General characteristics, classification (up to family; by Bierhorst,1971) of pteridophytes. Morphology, anatomy, and reproductive biology of <i>Lycopodium</i> , <i>Selaginella</i> , <i>Equisetum</i> , <i>and Marsilea</i> (developmental details not to be included). Silent features of <i>Rhynia</i> (a fossil plant). Heterospory and seed habit, stelar evolution. Economic importance of pteridophytes.	
Unit III: Gymnosperms	8
Classification (Pant-1957) and distribution of gymnosperms. Morphology, anatomy, and reproductive biology of <i>Cycas</i> , <i>Pinus</i> , and <i>Ephedra</i> (developmental details not to be included). Economic importance of Gymnosperms.	
Unit-IV: Palaeobotany	6
Brief account of the process of fossilization, types of fossils, and study techniques, geological time scale, contribution of Birbal Sahni.	
Unit-V: Angiosperm morphology (Stem, Roots, Leaves & Flowers, Inflorescence)	8
Morphology and modifications of roots, stems and leaves. Types of inflorescences, flower and flower parts, types of placentation and fruits.	
Unit-VI: Plant Anatomy	8

Meristematic and permanent tissues. Apical meristems and theories on apical organization-apical cell theory, histogen theory, and tunica-corpus theory. Secondary growth in root and stem. Annual growth rings, anomalous secondary growth in <i>Bignonia</i> , <i>Dracaena</i> , <i>Nyctanthus</i> .	
Unit-VII: Reproductive Botany (Higher plants)	8
Plant embryology: structure of microsporangium, microsporogenesis, structure of male gametophyte; structure of megasporangium and its types, megasporogenesis, structure and types of female gametophytes. Types of pollination, methods of pollination, fertilization, structure of dicot and monocot embryos. Double fertilization and endosperm.	
Unit-VIII: Palynology	6
Pollen morphology and structure. Applied aspects of palynology. Pollen allergy and palynology in forensic science.	

Course Outcomes:

- 1. Develop critical understanding of morphology, anatomy, and reproduction of bryophytes, pteridophytes, and gymnosperms.
- 2. Understanding of plant evolution and their transition to land habitat.
- 3. Understand morphology, anatomy, reproduction, and developmental changes therein through typological study and create a knowledge base in understanding the basis of plant diversity, economic values and taxonomy of plants.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

The evaluation scheme and mode will be as per the guidelines notified by Siddharth University, Kapilvastu, Siddharth Nagar.

Textbooks/Reference Books:

Course Books published in Hindi may be prescribed by the Universities.

1. वनस्पति विज्ञान (संपूर्ण) शैवाल, कवक ,लाइकेन ,जीवाणु, विषाणु, ब्रायोफाइटा ,टेरिडोफाइटा , जिम्नोस्पर्म तथा पुरा- वनस्पति विज्ञान ∶ लेखक - सिंह , पांडे व जैन प्रकाशन: रस्तोगी प्रकाशन ,मेरठ

- 2. आवृत्तबीजी वनस्पति विज्ञान (टैक्स!नॉमी ,एनाटॉमी ,एंब्रियोलॉजी तथा इकोनामिक बॉटनी) लेखक -सिंह, पांडे तथा जैन प्रकाशन :रस्तोगी प्रकाशन, मेरठ

Course for B.Sc.-II Semester (Botany) Paper-II Practical

Course Title: LAND PLANTS ARCHITECTURE (UG Honors)

Course Code: B040202P

Credit Units: 2 Level: UG

Course Objectives: To provide practical

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
-	-	02

knowledge to the students about architecture of archegoniate and flowering plants using various morphological, anatomical parameters etc.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of
(Minimum any 02 from each unit depending on facilities)	lectures/Teaching
	Hours (60)
Unit I: Bryophytes	8
Riccia and Marchantia-morphology of thallus, W.M. rhizoids and scales, V.S. thallus through Gemma cup, W.M. gemmae (all temporary slides), V.S. antheridiophore, archegoniophore, L.S. sporophyte (all permanent slides). Pogonatum morphology, W.M. leaf, permanent slides showing antheridial and archegonial heads, L.S. capsule.	
Unit II: Pteridophytes	8
Selaginella-Habit, rhizophore T. S., stem T. S. axis with strobilus, V. S. of strobilus, megasporophyll, and microsporophyll. Equisetum-Habit, rhizome, and stem T.S. and V.S. of strobilus. Marsilea-Habit, rhizome, and petiole T.S., V.S., and L.S. of Sporocarp.	
Azolla-Habitat and its Structure.	
Unit III: Gymnosperms	8
Cycas -Seedling, coralloid root and coralloid root T. S., T. S. of leaflet and rachis, micro and mega sporophyll, male cone V. S., micro sporophyll T. S., entire and V. S. of ovule. Pinus—Branch of indefinite growth, spur shoot, T.S. of old stem and needle, R.L.S., and T.L.S. of stem, male and female cone, and V.S. of male and female cone. Ephedra and Thuja: Habit, stem T.S. (young and mature), leaf T. S., male and female strobilus, V. S. of male and female cone, ovule V. S., and seed.	
Unit IV: Palaeobotany & Palynology	6
 Morphology of <i>Rhynia</i> (virtual) and fossils, gymnosperms and other groups. Visit to Birbal Sahni Institute of Paleosciences or a virtual conference with their scientists to learn fossilization. Mark and know about Indian geographical sites rich in plant fossils. 	

Unit V: Angiosperm Morphology	8
 Study of diversity in leaf shape, size, and other foliar features. Modifications in roots, stems, leaves, and inflorescences. Study of monopodial and sympodial branching. Study of different types of fruits. Study of inflorescence types (study from fresh/preserved specimens). Study of flower characteristics (study from fresh/preserved specimens). Study of different types of ovules (permanent slides/specimens/photographs). 	
Unit VI: Plant Anatomy	8
 Study of primary and secondary growth in roots and stems of monocots and dicots by section cutting and permanent slides. Study of the internal structure of dicot and monocot leaves. Study of the structure of stomata. Normal and anomalous secondary characters in <i>Bignonia</i>, <i>Dracaena</i>, <i>Boerhaavia</i> and <i>Nyctanthus</i>. 	
Unit VII: Reproductive Botany	7
 Structure of anther, microsporogenesis, and pollen grains Structure of ovules and embryo sac development (through slides). Study of embryo development in monocots and dicots. Study of seed germination. Study of pollen morphology of the following plants—Hibiscus, Vinca, Balsam, Ixora, Crotalaria, and Bougainvillea by microscopic observation. Calculation of pollen viability percentage using in vitro pollen germination techniques. 	
Unit VIII: Commercial uses and production Technology	7
 Azolla production. Production and propagation of ornamental <i>Pteris</i>, Cycadales, and Coniferales for landscaping.

Kapilvastu, Siddharth Nagar (UP)- 272202

Course for B.Sc.-III Semester (Botany)

Paper-I

Course Title: FLOWERING PLANTS IDENTIFICATION & AESTHETIC CHARACTERISTICS (UG

Honors)

Course Code: B040301T

Credit Units: 4

Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

Course Objectives: To learn the major patterns of diversity among plants, and the characters and types of data used to classify plants.

Pre-requisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of lectures/Teaching Hours
	(60)
Unit I: Taxonomic Resources & Nomenclature	8
Components of taxonomy (identification, nomenclature, classification); Taxonomic resources: Herbarium- functions and important herbaria, botanical gardens, flora. Botanical Nomenclature- Principles and rules of ICN.	
Unit II: Types of classification & Evidences	8
Artificial, natural, and phylogenetic. Bentham and Hooker (up to series), Taxonomic evidence from palynology, cytology, phytochemistry, and molecular biology data.	
Unit III: Identification of Angiospermic families -I	8
A study of the following families with emphasis on the morphological peculiarities and economic importance of their members (based on Bentham and Hooker's system)-Ranunculaceae, Malvaceae, Fabaceae, Cucurbitaceae, Rubiaceae, Asteraceae, Apocynaceae, Asclepiadiaceae, Solanaceae.	
Unit-IV: Identification of Angiospermic families -II	8
A study of the following families with emphasis on the morphological peculiarities and economic importance of their members (based on Bentham and Hooker's system)- Amaranthaceae, Euphorbiaceae,	

Papaveraceae Orchidaceae, Liliaceae, Poaceae.	
Unit-V: Modern trends in Plant taxonomy	8
Phenetics and Cladistics: Brief idea on Phenetics, Numerical taxonomy-methods, Operational Taxonomic Units, Cladistics- construction of dendrogram and primary analysis; Monophyletic, polyphyletic, and paraphyletic groups.	
Unit-VI: Tools & Software in Plant Identification	6
GIS Mapping (i) Patterns (ii) Features (iii) Quantities. GPS	
Free Phylogenetic Software.	
Digital Taxonomy, Description Language for Taxonomy- DELTA	
Unit-VII: Computer Applications	7
Introduction to Computers – classification, computer generation, software and hardware, operating systems, characteristics and applications, computer memory and its types, data storage. Microsoft Excel, data entry, graphs, formulas, and functions.	
	_
Unit-VIII: Aesthetic Characteristics of Plants	7
Aesthetic characteristics of plants, English, Italian, Mughal, and Japanese gardens; Features of a garden. Some Famous gardens of India. Conservatory, Greenhouse, Indoor Garden, Roof Garden, Bonsai.	

Course Outcomes: After the completion of the course, the student will be able:

- 1. To gain an understanding of the history and concepts underlying various approaches to plant taxonomy and classification.
- 2. To compare the different approaches to classification about the analysis of data.
- 3. To use diverse taxonomic resources, reference materials, and herbarium collections, and publications.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar

Textbooks/ Reference Books:

Course for B.Sc.-III Semester (Botany)

Paper-II Practical

Course Title: PLANT IDENTIFICATION TECHNOLOGY (UG Honors)

Course Code: B040302P

Credit Units: 2

Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
-	-	02

Course Objectives: To learn how plant specimens are collected, documented, and curated

for a permanent record.

Pre-requisites: Basic knowledge of Biology.

Descriptors/Topics (Perform any three experiments from each unit as per facility)	Total no. of lectures/Teaching Hours (60)
Unit I: Herbarium: Plant Collecting, Preservation, and Documentation	7
Stepwise Practicing Herbarium techniques: a. Field equipment, Global Positioning System (GPS) instrument, and Collection of any wild 25 plant specimens b. Learn to handle Herbarium making tools c. Pressing and drying of collected plant specimens d. Special treatments for all the varied groups of plants e. Mount on standard herbarium sheets f. Label using the Standard method g. Organize them and give the Index Register Number	
Unit II: Taxonomic Identification using plant structure	8
Classify 25 plants based on Taxonomic description (Plant Morphology, Anatomy, Reproductive parts, Habit, adaptation anomalies) according to Bentham and Hooker's system of classification in the following families: Malvaceae, Fabaceae (Papilionaceae), Solanaceae, Scrophulariaceae, Acanthaceae, Labiatae (Lamiaceae), Rubiaceae.	
Unit III: Identification during excursions	8
a. Conducting Spot identification (Binomial, Family) of common wild plants from families included in the theoretical syllabus (list to be provided) and making a field notebook, and filling Sample of a page of the field-book, used in the Botanical Survey of India. b. Describe/compare flowers in semi-technical language, giving V.S. of flowers, T.S. of ovaries, floral diagrams, and Floral Formulae. Identify and assign them to their respective families,	

giving reasons.	
Unit IV:	7
Collection, Preservation, and Storage of Algae, Fungi, Bryophytes, Pteridophytes (Two Each)	
Unit V: Botanical Nomenclature & Reporting Method	7
 a. Give nomenclature to collected plants as per ICBN rules and prepare labels as per BSI b. Author Citation, Effective Publication, and Principle of Priority: To show a specimen paper on the basic structure of a taxonomic Research published on a new species in a taxonomic journal 	
Unit VI: Computers	7
 Learning to use EXCEL, Microsoft PowerPoint, and Word, working with folders and Windows Utility, Create and Manage Files and Folder Tree. Practice browsing of different sites using a search engine. practice and understand different email services – Outlook, Yahoo Mail, Rediff Mail, etc. Practice Creating E-Mail accounts, Sending, Receiving & Storing of emails. Create and participate in a virtual conference in an interactive Zoom Meeting. Normal & Anomalous secondary thickening - Bignonia, Dracaena, Boerhaavia, Nyctanthus Study of primary and secondary growth in roots and stems of monocots and dicots by section cutting and permanent slides. Study of the internal structure of dicot and monocot leaves. Study of the structure of stomata. 	
Unit VII: Computer Application in Taxonomy	8
 Use Taxonomic Software's (Dichotomous Key) Practical's on Phylogenetic analysis Make a line drawing of Plants for description Using plant identification apps on Android phones 	
Unit VIII:	8
 Create a Bonsai of any plant Develop a miniature garden Draw Layouts of various types of gardens Plant Propagation Methods Practice

Kapilvastu, Siddharth Nagar (UP)- 272202

Course for B.Sc.-IV Semester (Botany)

Paper-I

Course Title: ECONOMIC BOTANY, ETHNOMEDICINE AND PHYTOCHEMISTRY (UG Honors)

Course Code: B040401T

Credit Units: 4

Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

Course Objectives: Understand phytochemical analysis related to medicinally important plants and economic products produced by the plants

Pre-requisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Origin and domestication of cultivated plants	7
Centers of diversity of plants. Domestication and introduction of crop plants. cultivation, production, and uses of Cereals, legumes, and Spices.	
Unit II: Botany of oils, Fibers, timber-yielding plants & dyes	7
Study of the plants with Botanical names, Family, part used, and economic uses yielding Edible and essential oils; Sugar, Fibers; Rubber, Dyes, Timber, biofuel crops.	
Unit III: Commercial production of Flowers, Vegetables, and Fruits (To be chosen area-wise)	7
Commercial greenhouse cultivation of rose, Gladiolus, bell pepper, strawberry, & Exotic leafy vegetables using Hydroponics.	
Unit-IV: IPR & Traditional Knowledge	8
IPR and WTO (TRIPS, WIPO), Patent Act 1970 and its amendments, Procedure of obtaining patents, Working of patents, Infringement, Copyrights, Trademarks, Geographical Indications, Traditional Knowledge, and Digital Library.	

Unit-V: Ethnobotany	8
Methodologies of ethnobotanical research: Field work, Literature, Herbaria, and Museum. Importance of ethnobotany in Indian systems of medicine (Siddha, Ayurveda, and Unani), Role of AYUSH, NMPB, CIMAP, and CARI.	
Unit-VI: Medicinal aspects	8
Study of common plants used by tribes (Aegle marmelos, Ficus religiosa, Cynadon dactylon, Eclipta alba, Oxalis, and Ocimum sanctum) Preservation of primeval forests in the form of sacred groves of individual species. Plants in primary health care: common medicinal plants: Tinospora, Acorus, Ocimum, Turmeric, and Aloe.	
Unit-VII: Pharmacognosy	8
Classification of drug plants based on sources of crude drugs – roots, rhizome, bulb, corm, leaves, stems, flowers, fruits, and seeds. Organoleptic study of <i>Adhatoda vasica, Andrographis paniculata, Azadirachta indica, Coriandrum sativum, Eclipta alba, Emblica officinalis, Ocimum sanctum, Ricinus communis, Vinca rosea,</i> and <i>Zingiber officinale</i> . Drug adulteration.	
Unit-VIII: Herbal Preparations & Phytochemistry	7
Collection of wild herbs -Capsules- compresses. Hydrotherapy or Herbal bath - Herbal oils - Liquid extracts or Tincture - Poultices - Salves - Teas. <i>Anthocyanins</i> and Coumarins and therapeutic applications, Lignans, Terpenes, Volatile oils and Saponins, Carotenoids and Alkaloids, and pharmacological activities.	

Course Outcomes: 1. Understand the uses of plants –will know one plant-one employment.

2. Know about the importance of Medicinal plants and their useful parts, economically important plants in our daily life, and about the traditional medicines and herbs, and their relevance in modern times.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar

Kapilvastu, Siddharth Nagar (UP)- 272202

Course for B.Sc.-IV Semester (Botany)

Paper-II Practical

Course Title: COMMERCIAL BOTANY & PHYTOCHEMICAL ANALYSIS (UG Honors)

Course Code: B040202P

Credit Units: 2

Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
-	-	02

Course Objectives: Gain the knowledge about cultivation practices of some economic crops.

Pre-requisites: Basic knowledge of Botany

Descriptors/Topics (perform minimum any three experiments from each unit)	Total no. of lectures/Teaching Hours (60)
Unit I: Economic Botany & Micro techniques	8
 Cereals: Wheat (habit sketch, L.S./T.S. of grain, starch grains, micro-chemical tests); rice (habit sketch, study of paddy and grain, starch grains, micro-chemical tests) Legume: Pea or ground nut (habit, fruit, seed structure, micro-chemical tests) Source of sugars and starches: Sugarcane (habit sketch; cane juice- micro-chemical tests); potato (habit sketch, tuber morphology, T.S. of tuber to show localization of starch grains, W.M. of starch grains, micro-chemical tests). Tea- tea leaves, tests for tannin Mustard- plant specimen, seeds, tests for fat in crushed seeds. Timbers: a section of young stem. Jute- specimen, transverse section of stem, tests for lignin on T.S. of stem, and study of fiber following maceration technique. Study of specimens of economic importance mentioned in Unit I & II 	
Unit II: Commercial Cultivation	8

Field visit to greenhouses for understanding Floriculture and vegetables production, Development of hydroponics nutrient solutions, and running models for the cultivation of vegetables. Development of hydroponics nutrient solutions and running models for the cultivation of fodder Unit III: Cultivating Medicinal and aromatic plants & Essential oil extraction Lemon grass/ Neem/ Zinger /Rose/Mint	7
Unit IV: Documentation from Traditional Knowledge Digital Library	7
1. Mark the Geographic Indications on the Map, understand –Nakshatra Vatika, Navgrah Vatika, and develop in your college 2. To extract the names of the plants and Botanical uses depicted in our epics. Visit NISCAIR, New Delhi	
Unit V: Ethnobotany	7
 Study of common plants used by tribes. Aegle marmelos, Ficus religiosa, Cynadondactyl. Visit a tribal area and collect information on their traditional method of treatment usingcrude drugs. Familiarize with at least 5 folk medicines and study the cultivation, extraction, and theirmedicinal application. Observe the plants of ethnobotanical importance in your area. Visit to an Ayurveda college or Ayurvedic Research Institute / Hospital 	
Unit VI: Instrumentation and herbal Preparations	8
Analyze some active ingredients using chromatography /Spectrophotometry Develop capsule of herbs/ Develop herbal oil/ Develop Poultice/ cream	
Unit VII: Pharmacognosy	8
Organoleptic studies of plants mentioned in the theory: 1. Morphological studies of vegetative and floral parts. 2. Microscopic preparations of root, stem, and leaf. 3. Stomatal number and stomatal index. 4. Vein islet number. 5. Palisade ratio. 6. Fibers and vessels (maceration). 7. Starch test 8. Proteins and lipid test	
Unit VIII: Phytochemistry	7
Preliminary phytochemical tests for alkaloids, terpenoids, glycosides, volatile oils, tannins & resins. Any 5 herbal preparations.

Practical (P)

Course for B.Sc.-V Semester (Botany) Paper-I

Course Title: PLANT PHYSIOLOGY, METABOLISM & BIOCHEMISTRY (UG Honors)

Course Code: B040501T

Credit Units: 4 Level: UG

Course Objectives: Understand the role of physiological

and metabolic processes for plant growth and development.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Plant water relation, mineral nutrition, transpiration, and translocation	7
Brief idea of diffusion, osmosis, and water potential. Transpiration and its significance, guttation. Criteria of essential elements, symptoms of mineral deficiency. Mechanisms and theories of ion uptake and translocation.	
Unit II: Carbon oxidation	8
Glycolysis, fate of pyruvate, Krebs cycle, Mitochondrial electron transport system, Oxidative phosphorylation, and factors affecting respiration. Anaerobic respiration and fermentation.	
Unit III: Nitrogen metabolism	7
Nitrate assimilation, biological nitrogen fixation (examples of legumes and non	
legumes), physiology and biochemistry of nitrogen fixation, importance of nitrogen metabolism.	
Unit-IV: Photosynthesis & Lipid metabolism	7
Photosynthesis: Pigments, Electron Transport System and Photophosphorylation, C3 and C4 cycle, CAM pathway, and its significance. Lipid Metabolism: Synthesis and breakdown of triglycerides, oxidation, gluconeogenesis, and its role in the mobilization of lipids during seed germination.	
Unit-V: Plant Development, Movements, Dormancy & Responses	8
Developmental roles of phytohormones (auxins, gibberellins, cytokinins, ABA, and	

ethylene). Photoperiodism (SDP, LDP, and day-neutral plants). Phytochrome (discovery, structure, and function). Seed dormancy and vernalization.	
Unit-VI: Biomolecules- Carbohydrate & Lipids	8
Carbohydrates: Nomenclature and classification, Role of monosaccharides (glucose, fructose), disaccharides (sucrose); oligosaccharides; and polysaccharides (structural-cellulose, storage-starch). Lipids: Storage lipids: Fatty acid structure and functions, Structural lipids: Phosphoglycerides.	
Unit-VII: Biomolecules-Proteins & Nucleic acids	7
Proteins: Structure of amino acids, peptide bonds, protein structure (primary, secondary, tertiary, and quaternary), isoelectric point, protein denaturation. Nucleic acids: Structure of nitrogenous bases, structure and function of nucleic acids, nucleic acid denaturation and renaturation.	
Unit-VIII: Enzymes	8
Structure of enzymes: Holoenzyme, apoenzyme, cofactors, coenzymes, and prosthetic	

Course Outcomes: Students with basic knowledge of biochemical and physiological processes operating in plant system.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

The evaluation scheme and mode will be as per the guidelines notified by Siddharth University, Kapilvastu, Siddharth Nagar.

Record Matrix

Kapilvastu, Siddharth Nagar (UP)- 272202

Course for B.Sc.-V Semester (Botany) Paper-II

Course Title: MOLECULAR BIOLOGY & BIOINFORMATICS (UG Honors)

Course Code: B040502P

Credit Units: 4 Level: UG

Course Objectives: To know about basic concepts of

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

DNA replication, transcription, translation, gene regulation, genetic engineering and bioinformatics including biological databases and phylogenetic analysis.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Genetic material	7
Different types of genetic material; DNA structure, packaging, replication (prokaryotes): semi-conservative, conservative, and dispersive modes of replication. Basic mechanism of DNA replication.	
Unit II: Transcription & Regulation of Gene Expression	7
Types and structures of RNA (mRNA, tRNA, rRNA), various types of RNA polymerases, transcription mechanism. Genetic code and translation (prokaryotes) Regulation of gene expression in prokaryotes (Lac operon model).	
Unit III: Principles & techniques of genetic engineering	8
Basic concept of genetic engineering. Vectors and enzymes used in genetic engineering. PCR and RT-PCR, DNA Finger printing. Blotting techniques: Southern, Northern and Western Blotting,	
Unit-IV: Applications of genetic engineering	7
Pest-resistant (Bt-cotton), herbicide-resistant plants (Roundup Ready soybean), Transgenic crops with improved quality traits (Flavr Savr tomato, Golden rice). Role of transgenics in bioremediation (superbug), production of industrial enzymes (Protease, Lipase). Hybridoma and monoclonal antibodies.	

Unit-V: Bioinformatics & its applications (Basic)	8
Brief ideas of programming languages in bioinformatics. Scope of bioinformatics-genomics, transcriptomics, proteomics. Applications and limitations of bioinformatics.	
Unit-VI: Biological databases (Basic)	8
Introduction to biological databases—primary, secondary, and composite databases, NCBI, nucleic acid databases (GenBank, EMBL, DDBJ, NDB), protein databases (PIR, Swiss-Prot, PDB).	
Unit-VII: Data Generation and Data Retrieval Proteins & Nucleic Acids (Basic)	7
Generation of data (gene sequencing, protein sequencing), sequence submission tools (BankIt, Sequin, Webin), sequence annotation, and data retrieval systems (SRS, Entrez).	
Unit-VIII: Phylogenetic analysis (Basic)	8
Similarity, identity, and homology; Alignment-local and global alignment, pairwise and multiple sequence alignments. Methods of Alignment (BLAST and FASTA). Phylogenetic analysis: Construction of phylogenetic trees and methods of construction of phylogenetic trees.	

Course Outcomes: Students with basic knowledge of different aspects of molecular biology and bioinformatic tools.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar

on various physiological, biochemical and metabolic processes operating in plants.

Prerequisites: Botany as a major subject in a previous year.

Descriptors/Topics	Total no. of
(Perform any three experiments from each unit based on facility)	lectures/Teaching Hours (60)
Unit I: Plant water relations, mineral nutrition, and translocation in phloem	8
 Determination of osmotic potential of plant cell sap by the plasmolytic method using leaves of <i>Rhoeo Tradescantia</i>. Experiment to demonstrate the transpiration phenomenon with the bell jar method. Structure of stomata (dicot and monocot). Determination of the rate of transpiration using cobalt chloride method. Experiment to measure the rate of transpiration by using Farmer's potometer and Ganong's potometer. Assessment of effect of temperature on membrane permeability by colorimetric method. Study of mineral deficiency symptoms using plant material/photographs. 	
Unit II: Nitrogen metabolism, photosynthesis & respiration	8
 Separation of plant pigments by solvent and paper chromatography. Estimation of total chlorophyll content from different chronologically aged leaves (young, mature, and senescent) by Arnon method. Effect of HCO₃ concentration on oxygen evolution during photosynthesis in an aquatic plant and to find out the optimum and toxic concentration (either by volume measurement or bubble counting). 	

4. Measurement of oxygen uptake by respiring tissue (per hr.).	
5. Determination of the RQ of germinating seeds.	
6. Effect of light intensity on oxygen evolution in photosynthesis using Wilmott's	
bubbler.	
bubblet.	
Unit III: Plant development, movements, dormancy & responses	7
	, , , , , , , , , , , , , , , , , , ,
1. Geotropism and phototropism- Klinostat method.	
2. Hydrotropism.	
3. To study the phenomenon of seed germination (effect of light).	
4. To study the induction of amylase activity in germinating grains.	
5. Test of seed viability by the TTC method.	
Unit IV: Techniques for biochemical analysis	7
1. Weighing and preparation of solutions—percentage, molar and normal	
solutions,	
dilution from stock solution, etc.	
2. Separation of amino acids by paper chromatography.	
3. Detection of organic acids: citric, tartaric, oxalic, and malic from laboratory	
samples.	
4. Qualitative analysis of carbohydrates.	
5. Estimation of reducing sugar by the anthrone method.	
6. Qualitative analysis of Lipids.	
7. Qualitative analysis of amino acids and proteins.	
8. Quantitative analysis of nucleic acids.	
9. Analysis of dietary supplements, nutraceuticals and antioxidants	
10. Testing of adulterants in food items.	
10. Testing of additionality in food items.	
<u> </u>

Study of DNA replication through photographs: Modes of replication - Rolling circle, Theta and semi-discontinuous; Semiconservative model of replication (Meselson and Stahl's experiment); Telomerase assisted endreplication of linear DNA. Study of structures of: tRNA (2D and 3D); prokaryotic RNA polymerase and eukaryotic RNA polymerase II through photographs. Study of the following through photographs: Assembly of Spliceosome machinery; Splicing mechanism in group I & group II introns; Ribozymes and Alternative splicing. Understanding the regulation of lactose (lac) operon (positive & negative 	

Unit VII: Genetic Engineering	8
1. Construction of restriction map of circular and linear DNA from the	
data provided.	
2. Isolation of plasmid DNA.	
3. Restriction digestion and gel electrophoresis of plasmid DNA	
(demonstration/photograph).	
4. Calculate the percentage similarity between different cultivars of a	
species using RAPD profile. Construct a dendrogram and interpret	
results.	
5. Agarose gel analysis of plasmid DNA.	
6. Restriction digestion of plasmid DNA -Demonstration of PCR	
Unit VIII: Applications of genetic engineering	8
1. Viability tests of cells.	
2. Study of methods of gene transfer through photographs: Agrobacterium-	
mediated, direct gene transfer by electroporation, microinjection,	
microprojectile bombardment.	
3. Study of steps of genetic engineering for production of Bt cotton, Golden rice	
and Flavr Savr tomato through photographs.

Kapilvastu, Siddharth Nagar (UP)- 272202

Course for B.Sc.-VI Semester (Botany) Paper-I

Course Title: CYTOGENETICS, PLANT BREEDING & NANOTECHNOLOGY (UG Honors)

Course Code: B040601T

Credit Units: 4
Level: UG

Course Objectives: Acquire knowledge on cell

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

ultrastructure, basic concept of genetics, plant breeding, biostatistics, nanotechnology and AI tools with respect of plant science.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Cell biology	8
Structure and function of cell, cell wall, plasma membrane, ribosomes, endoplasmic reticulum, mitochondria, chloroplast, peroxisomes and nucleus. Structure of chromosome, chromosomal nomenclature, chromatids, centromere, telomere, satellite, and secondary constriction. Cell cycle, mitosis and meiosis.	
Unit II: Genetics	7
Mendelian theory of inheritance, chromosome theory of inheritance, linkage and crossing over. Gene interaction, extranuclear inheritance, the concept of sex determination and sex chromosomes, and patterns of sex determination in plants.	
Unit III: Plant breeding	8
Plant introduction, agencies of plant introduction in India. Procedure of introduction and acclimatization. Selection (mass selection, pure line selection, and clonal selection), hybridization (intergeneric, interspecific, and intervarietal), male sterility. Mutation, molecular breeding and its achievements in India.	
Unit-IV: Biostatistics	7
Definition, statistical methods, basic principles, variables—measurements, functions, limitations, and uses of statistics. Central tendency-arithmetic mean, mode, and median, standard deviation. Test of significance: chi-square test for goodness of fit.	

Unit-V: Plant tissue culture	8
Principles, components, and techniques of in vitro plant cultures, callus cultures, protoplast culture, somatic hybridization—selection of hybrid cells, and somaclonal variation.	
Unit-VI: Nanotechnology	7
Fundamentals of the nanoscale self-assembly process involved in important functional biomolecules such as nucleic acid (DNA and RNA), proteins, and enzymes. Advantages and applications of biologically synthesized nanomaterials. Biomineralization, magnetosomes, nano-pesticides, nano-fertilizers and nanosensors.	
Unit-VII: Artificial intelligence in plant sciences	8
Big Data Analytics, Blockchain Technology, Machine Learning, Expert Systems and Fuzzy Logic, Artificial Neural Networks and Genetic Algorithms, and Applications of Artificial Neural Networks in Plant Science.	
Unit-VIII: Introduction to the use of digital technologies—AI, IoT & ICT in	7
Botany	
Educational software—INFLIBNET, internet as a knowledge repository—Google Scholar, ScienceDirect. Database management, platforms, Graphical user interface, ICT applications in different crops and horticulture.	

Course Outcomes: Students having basic knowledge of plant genetics, plant breeding, nanotechnology, along with implications of AI and statistical tools.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

The evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Course for B.Sc.-VI Semester (Botany) Paper-II

Course Title: ECOLOGY & ENVIRONMENT (UG Honors)

Course Code: B040602T

Credit Units: 4 Level: UG

Course Objectives: To understand the interaction of

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

living organism with their biotic, abiotic component and environment.

along with ecosystem functioning.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Natural resources & sustainable utilization	7
Soil degradation and management strategies; Wetlands-threats and management strategies, Ramsar sites.	
Forests: Forest types in India, minor and major forest products; deforestation, reforestation and afforestation.	
Energy: Renewable and non-renewable sources.	
Unit II: Ecology & Ecosystem	8
Introduction of ecology, ecological factors (abiotic and biotic), Ecosystem structure and function. Food chains, food web and ecological pyramids. Biogeochemical cycles. Ecological adaptations -Hydrophytes, xerophytes, halophytes. Ecological succession-Hydrosere and xerosere.	
Unit III: Soil formation, properties & conservation	7
Soil formation and composition, soil profile, soil types in India, Soil erosion. Soil conservation: Biological (mulching, strip cropping, and crop rotation); Mechanical—basin Listing, soil reclamation.	
Unit-IV: Biodiversity and its conservation	7
Introduction of biodiversity, types of biodiversity (genetic, species, and ecosystem diversity), hotspots of biodiversity, Red Data Book. Threats and Conservation of biodiversity (<i>Ex-situ</i> and <i>in-situ</i> conservation,	

botanical gardens, National Park, Sanctuaries, Bioreserves.) Endemic and endangered plants in India.	
Unit-V: Phytogeography	7
Biogeographic regions of India, natural vegetation of India, basic principles governing geographical distribution of plants (age area hypothesis and continental drift theory), Vegetational types in Uttar Pradesh.	
Unit-VI: Environmental audit & sustainability (Basic)	8
Introductory concepts of environmental audit; Guidelines of environmental audit; concept of energy and green audit, concept of sustainable agriculture; India's environment action programme: issues, approaches and initiatives towards Sustainability.	
Unit-VII: Pollution, waste management & circular economy (Basic)	8
Environmental pollution, environmental protection laws, activated sludge process (ASP), regulatory framework for pollution monitoring and control, implementation of CNG, waste types, collection and disposal, Recycling of solid wastes (hazardous & non-hazardous).	
Unit-VIII: Environmental ethics, carbon credits & role of GIS (Basic)	8
Carbon credit: concept, exchange of carbon credits. Carbon sequestration: importance, meaning, and ways. Climate change, global warming, acid rain, ozone depletion. Geographical Information Systems.	

Course Outcomes: Students having knowledge of major environmental factors, concerns and national and international efforts for their management.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Course for B.Sc.-VI Semester (Botany) Paper-II Practical

Course Title: LAB ON CYTOGENETICS, BIOSTATISTICS, TISSUE CULTURE ECOLOGY, SOIL

SCIENCE & ENVIRONMENT MANAGEMENT (UG Honors)

Course Code: B040603P

Credit Units: 2 Level: UG

Course Objectives: To acquire experimental

understanding on cytogenetics, tissue culture, breeding

and uses of statistical analysis in data interpretation.

Prerequisites: Basic knowledge of Biology.

Descriptors/Topics	Total no. of
(Perform any three experiment from each unit as per facility)	lectures/Teaching Hours (60)
Unit I: Cell biology	7
 Study of plant cell structure with the help of epidermal peel mount of <i>Allium Rhoeo / Crinum</i>. Measurement of cell size by the technique of micrometry. Counting cells per unit volume with the help of hemocytometer (yeast/pollen grains). Determination of mitotic index and frequency of different mitotic stages in pre fixed root tips of <i>Allium cepa</i>. 	
Unit II: Genetics	8
1. Monohybrid cross (dominance and incomplete dominance).	
1. Mononyona cross (dominance and incomplete dominance).	
2. Dihybrid cross (dominance and incomplete dominance).	
2. Dihybrid cross (dominance and incomplete dominance).	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. 	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. b. Dominant epistasis 12:3:1 	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. b. Dominant epistasis 12:3:1 c. Complementary genes 9:7 	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. b. Dominant epistasis 12:3:1 c. Complementary genes 9:7 d. Duplicate genes with cumulative effect 9:6:1 	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. b. Dominant epistasis 12:3:1 c. Complementary genes 9:7 d. Duplicate genes with cumulative effect 9:6:1 e. Inhibitory genes 13:3 	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. b. Dominant epistasis 12:3:1 c. Complementary genes 9:7 d. Duplicate genes with cumulative effect 9:6:1 e. Inhibitory genes 13:3 4. Oserve the genetic variations among inter- and intraspecific plants. 	
 2. Dihybrid cross (dominance and incomplete dominance). 3. Gene interactions (all types of gene interactions mentioned in the syllabus) a. Recessive epistasis 9:3:1. b. Dominant epistasis 12:3:1 c. Complementary genes 9:7 d. Duplicate genes with cumulative effect 9:6:1 e. Inhibitory genes 13:3 	

Unit III: Biostatistics	7
1. Univariate analysis of statistical data: Statistical tables, mean, mode, median,	
2. Standard deviation and standard error (using seedling population / leaflet size).	
3. Calculation of correlation coefficient values and finding out the	
probability.	
4. Determination of goodness of fit in Mendelian and modified Mono- and	
dihybrid ratios by Chi-square analysis and comment on the nature of	
inheritance.	
5. Computer applications in biostatistics—MS Excel and SPSS.	
Unit IV: Plant tissue culture	8
1. Familiarization of instruments and special equipment used in the plant tissue culture	
experiments.	
2. Micropropagation of potato/tomato-demonstration.	
3. Protoplast isolation and culturing-demonstration.	
Unit V: Ecology & environment	8
Ecological adaptations- hydrophytes, xerophytes, halophytes, epiphytes, and	
parasites.	
a) Study of morphological adaptations of hydrophytes and xerophytes (four	
each).	
b) Study of biotic interactions of stem parasite (<i>Cuscuta</i>), root parasite	
(<i>Orobanche</i>), epiphytes, and predation (insectivorous plants).	
2. Observation and study of different ecosystems mentioned in the syllabus.	
3. Field visit to familiarize students with the ecology of different sites.	
	8
Unit VI: Soil formation, properties & conservation genetics 1. Determination of pH of various soil and water samples (pH meter, universal	0
1. Determination of pri of various son and water samples (pri meter, universar	
indicator/Levihand comperator and pH paper)	
indicator/Lovibond comparator and pH paper).	
2. Analysis of carbonates, chlorides, nitrates, sulphates, organic matter and base	
2. Analysis of carbonates, chlorides, nitrates, sulphates, organic matter and base deficiency from two soil samples by rapid field tests.	
2. Analysis of carbonates, chlorides, nitrates, sulphates, organic matter and base deficiency from two soil samples by rapid field tests.3. Soil profile study.

Course for B.Sc-VII Semester (Botany) Paper-I

Course Title: ADVANCE MICROBIOLOGY AND PLANT PATHOLOGY (For UG Honors & UG Honors with

Research)

Course Code: BOUC401

Credit Units: 4 Level: UG

Course Objectives: Strengthening knowledge about

advancement in the field of microbiology and plant pathology. **Pre-requisites:** Botany as major subject in previous year.

Descriptors/Topics	Total no. of
	lectures/Teaching
	Hours (60)
Unit-I: Significance of microbes	15
Microbial symbiosis and their significance.	
Plant microbiome and plant health (PGPR and defense priming).	
Microbial fermentations, antibiotics, vaccines.	
Microbes in bioremediation.	
Biological control and IPM.	
Impact of crop diseases on global food security.	
Unit II: Plant pathogen interaction	15
Stages in the development of disease in plants.	
Bacterial secretion systems, effectors and pathogenesis.	
Plant immunity.	
Biochemistry of host-virus interaction (Hypersensitive response), systematic acquired	
resistance (SAR) Engineering pathogen resistance in plants.	
Unit III: Modern methodologies in plant virology & bacteriology, and important viral	15
and bacterial disease.	
Purification of plant viruses.	
Modern methods of plant virus control (cross protection, PDR, RNAi, CRISPR-	
Cas system).	
Serological and molecular methods for detection and identification of plant	
viruses and bacteria.	
Viral and bacterial diseases and control: Symptoms, causal organism, disease	

cycle and control measures of mosaic diseases on tobacco and cucumber, yellow vein mosaic of bhindi, tomato leaf curl, citrus canker, soft rot of fruits and vegetables, scab of potato and little leaf of brinjal.	
Unit-IV: Modern methodologies in fungal pathology and important fungal disease.	15
Molecular identification of fungal species.	
Mycorrhizal fungi and their significance.	
Fungal diseases and their control: Symptoms, causal organism, disease cycle and control	
measures of damping off seedlings, white rust of crucifers, late blight of potato, loose smut	
of wheat, black stem rust of wheat, early blight of potato, Alternaria leaf spot, red rot of	
sugarcane, wilt of arhar.	

Course Outcomes: After the completion of the course the students will be able to:

- 1. Understand the impact and significance of microbes in maintaining a healthy ecosystem.
- 2. Learn about the host-pathogen interaction and disease management.
- 3. Gain knowledge about uses of microbes for plant growth promotion and as biocontrol agents.
- 4. Learn about the methods for detection of plant pathogens.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar

Percentage of revision:	Not applicable (New Course)

Kapilvastu. Siddharth Nagar (UP)- 272202

Proposed Course for VII Semester (Botany) Paper-II

Course Title: TRENDS IN PLANT SCIENCES (For UG Honors & UG Honors with Research)

Course Code: BOUC402

Credit Units: 04

Level: UG

Credit Distribution of the course

Lecture (L) Tutorial (T) Practical
(P)

04 - -

Course Objectives: Understanding and strengthening of current research

frontiers in ecological science and to develop ability for analysing and interpreting ecological data.

Pre-requisites: Botany as major subject in previous year.

Descriptors/Topics	Total no. of
	lectures/Teaching
	Hours (60)
	15
Unit I: IPR & Traditional Knowledge	
IPR and WTO (TRIPS, WIPO), Patent Act 1970 and its amendments, TIFAC, NRDC, Rights, Procedure of obtaining patents, Working of patents, Infringement, Copyrights, Trademarks, Geographical Indications, Traditional Knowledge Digital Library, Protection of Traditional Knowledge & Protection of Plant Varieties and Biotech inventions.	
Unit II: Nanotechnology (Advance)	15
Fundamentals of nanoscale self-assembly process involved in important functional biomolecules such as Nucleic acid (DNA and RNA), Proteins, Enzymes. Cell structure and organelles, nanoscale assembly of cellular components (cell membrane and liposomes). Nanoscale assembly of microorganisms (virus). Nano-particles synthesis, Biological synthesis of Nanoparticles, Advantages and applications of biologically synthesized nanomaterials. Introduction to biological nanomaterials, Biomineralization, Magnetosomes, nano-pesticides, nano-fertilizers, nano-sensors.	
Unit III: Stress Physiology	15
Plant responses to various types of abiotic stresses: drought, salinity, flooding, extreme temperature (low and high), metal toxicity, ozone and UV-B radiations. Oxidative stress and redox metabolism: Reactive oxygen species (ROS)- singlet, superoxide, hydrogen peroxide and hydroxyl radicals in plants. Site of generation and biological effect of ROS- oxidative damage, oxidation of lipids, proteins and nucleic acids. Antioxidant defence mechanisms.	
Unit IV: Bioinformatics (Advance)	15
Basics of Bioinformatics & Phylogenetic analysis, Scope of bioinformatics Genomics, Transcriptomics, Proteomics, Metabolomics, Molecular Phylogeny, Applications of bioinformatics;	

biological databases - NCBI, nucleic acid databases (GenBank, EMBL), protein databases (Swiss-Prot, PDB), metabolic pathway database (KEGG); Advance phylogenetic analysis: Similarity, identity and homology, Alignment – local and global, pairwise and multiple sequence, Methods of Alignment (BLAST and FASTA); Phylogenetic tree and analysis.

Course Outcomes: After the completion of the course the students will be able to:

- 1. Gain insight into new methods, techniques and protocols that advance their ability to study and understand the biology of plants.
- 2. Understand potential of traditional knowledge for human welfare.
- 3. Learn about the responses of plants to various abiotic stresses.
- 4. Understand the applications of nanotechnology in various spheres.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Kapilvastu, Siddharth Nagar (UP)- 272202

Proposed Course for VII Semester (Botany) Paper-III

Course Title: TECHNIQUES AND INSTRUMENTATION (For UG Honors & UG Honors with Research)

Course Code: BOUC403

Credit Units: 04 Level: UG Credit Distribution of the course

Lecture (L) Tutorial (T) Practical (P)

04 - -

Course Objectives: To develop basic knowledge of techniques and

instrumentation in students.

Pre-requisites: Botany as major subject in previous year.

Descriptors/Topics	Total no. of
	lectures/Teaching
	Hours (60)
	15
Unit I: Culture techniques and microscopy.	
Sand culture/water culture and controlled soil culture techniques.	
Tracer techniques: Detection and measurement of isotopes and applications.	
Microscopy: Bright field, phase contrast, fluorescence, confocal, transmission electron	
microscopy, scanning electron microscopy.	
Unit II: Centrifugation and Chromatography Techniques	15
Centrifugation and ultracentrifugation techniques and their applications.	
Chromatography: Principles and applications of Paper, TLC, Column, Gel Filtration, Affinity, Ion	
Exchange, HPLC, GC.	
Flow cytometry.	
Unit III: Photometric techniques & Instruments.	15
Colorimetry, Spectrophotometry (UV-visible), Fluorescence spectrometry, Chemiluminescence	
Spectrometry, Atomic Absorption/emission spectrometry. Basic features and principles of IR, Raman,	
Mass, NMR, ESR	
Unit IV: Proteomics and genomics related techniques and instruments	15
Electrophoresis techniques and their applications.	
Amino acid analysis and protein sequencing.	
Applications and detection of proteins and nucleic acids (Western Transfers and Immune blots	
and Southern blot), MAB technology.	
DNA chip technology and Microarray.	
PCR and RT-PCR.	

Course Outcomes: After the completion of the course the students will be able to:

- 1. Investigate natural metabolic products of plants using various techniques.
- 2. Understand growth and development in plant cells through various techniques.
- 3. Use acquired knowledge in detection of adulterants in food items.
- 4. Use learned techniques in metabolomic studies.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Kapilvastu, Siddharth Nagar (UP)- 272202

Proposed Course for VII Semester (Botany) Paper -IV

Course Title: Landscaping and Floriculture (For UG Honors)

Course Code: BOUC404

Credit Units: 04 Level: UG

Credit Distribution of the course			
Lecture (L) Tutorial (T) Practical (P)			
04	-	-	

Course Objectives: To provide basic knowledge about landscaping and

floriculture.

Pre-requisites: Botany as major subject in previous year.

Course Contents/Syllabus:

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Ornamental plants and cultivation	15
Ornamental plants-flowering annuals, herbaceous perennials, divine vines, shade and ornamental	
trees, ornamental bulbous and foliage plants, cacti and succulents, palms and cycads, ferns and	
selaginellas. Cultivation of plants in pots, indoor gardening and bonsai.	
Unit II: Principles of gardening and important gardens	15
Principles of garden design-English, Italian, French, Persian, Mughal and Japanese gardens,	
features of garden (garden wall, fencing, steps, hedge, edging, lawn, flower, beds, shrubbery,	
borders, water garden), some famous gardens of India and world.	
Unit III: Landscaping	15
Landscaping places of public importance-landscaping highways and educational institutions.	
Unit IV: Commercialization of floriculture	15
Commercial floriculture- factors affecting flower production, production and packaging of cut flowers(Carnation, Aster, Chrysanthemum, Dahlia, Gerbera, Gladiolous, Marigold, Rose, Lilium and Orchids). Diseases and pests of ornamental plants.	

Course Outcomes: After the completion of the course the students will be able to:

- 1. Understand basic concept of floriculture.
- 2. Initiate commercial floriculture- a start-up.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

- 1. John M. Dole and Ronald E. Cawthon. (2005) Floriculture: Principles and Species. Publisher-Pearson/Prentice Hall.
- 2. Randhawa G.S and Mukhopadhyay A. (1986). Floriculture in India. Allied Publisher Private Ltd.
- 3. Desh Raj. (2017). Floriculture At A Glance. Kalyani Publishers.
- 4. Singh AK. (2020). Textbook of Floriculture And Landscaping. New India Publishing Agency-Nipa.
- 5. Chattopadhyay SK.(2008). Commercial Floriculture Hardcover. Publisher-Gene-Tech Books.

Kapilvastu, Siddharth Nagar (UP)- 272202

Proposed Course for VII Semester (Botany) Paper -V

Course Title: Practical (For UG Honors and UG Honors with Research)

Course Code: BOUP405

Credit Units: 04

Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
	-	04

Course Objectives: To acquaint students with basic techniques and

methodologies used in microbial and plant sciences.

Pre-requisites: Botany as major subject in previous year.

Descriptors/Topics	Total no. of
(Perform any three experiments from each unit as per facility)	lectures/Teaching Hours (60)
	15
Unit I: Experimental Plant Pathology	
Study of fermentative diversity of bacteria.	
Isolation and characterization of soil bacteria.	
Morphology and staining of nitrogen fixing bacteria.	
Enumeration of rhizosphere to non-rhizosphere population of bacteria.	
Isolation of antagonistic bacterial sp. from the rhizosphere.	
Isolation of phosphate solubilizing microorganisms.	
Microscopic observations of root colonization by VAM fungi.	
Isolation of phyllosphere microflora.	
Unit II: Applied microbiology	15
Study of diseased plant specimens and materials.	
Preparation of media for isolation of the pathogen: bacteria (NA) and fungi (PDA).	
Isolation of pathogens from infected material.	
Study of the hypersensitive response during virus infection.	
Insect transmission of plant virus.	
Purification of plant virus.	
Serological detection of plant viruses.	
Unit III: Stress Physiology	15
Quantitative estimation of proline in water stressed leaf tissues.	
Quantitative estimation of hydrogen peroxide content in leaf tissues.	
Qualitative visualization of superoxide anions in stressed leaf tissues.	
Quantitative estimation of ascorbic acid in plant tissue.	

Unit IV: Isolation of biomolecules.	15
Chromatographic procedures (gel filtration) for separation of low molecular and high	
molecular weight leaf extract components.	
Thin layer chromatography for detection of amino acids	
Isolation of proteins from leaf sap through precipitation and centrifugation.	
Separation of proteins by electrophoresis.	

Course Outcomes: After the completion of the course the students will have knowledge of basic techniques and protocols used in microbial and plants science related studies.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

research methodologies.

Pre-requisites: Botany as major subject in previous year.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
	15
Unit I: Basic concepts of research	
Meaning of research in biological sciences, Research methods vs Research methodology,	
Motivation and objectives of research problems. Types of research: Descriptive vs. Analytical,	
Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical.	15
Unit II: Research design and survey of literature	15
Concept and need, identification of research problem.	
Basic principles of research design-objectives, introduction, rationale of work, material and	
methods, designing experiments.	
Necessity and importance of review of literature in defining a research problem. Primary and	
secondary sources of literature- reviews, treatise, monographs and web.	
Literature review in identification of gap areas.	
Unit III: Data collection, analysis and scientific writing	15
Observation, collection, analysis, interpretation of data.	
Format of writing research paper, popular scientific articles, review and reports (structure,	
language, illustrations and tables, reference citation).	
Principles of biostatistics.	
Computer applications in data compilation and analysis.	
Unit IV: Research Ethics	15
Ethical issues, ethical committees, commercialization, copy rights, royalty, IPR, Patent Laws.	
Trade related aspects of Intellectual Property Rights.	

Reproduction of published material, plagiarism, acknowledgement, reference citation.	
Impact factor and citation index.	

Course Outcomes: After the completion of the course the students will be able to:

- 1. Understand the basic concepts and techniques used in research viz. sampling techniques, research designs and techniques of analysis.
- 2. Develop understanding of the basic framework of research process.
- 3. Learn how to review literature and collect data.
- 4. Develop an understanding of the ethical dimensions of conducting applied research.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Suggested Readings-

- 1. Chawla, Deepak & Sondhi, Neena (2011). Research methodology: Concepts and cases, Vikas Publishing House Pvt. Ltd. Delhi.
- 2. Pawar, B.S. (2009). Theory building for hypothesis specification in organizational studies, Response Books, New Delhi.
- 3. Kothari, C.R. Research Methodology (Methods and Techniques), New Age Publisher
- 4. Dawson, C. (2002). Practical research methods. UBS Publishers, New Delhi.
- 5. Stapleton, P., Yondeowei, A., Mukanyange, J., Houten, H. (1995). Scientific writing for agricultural research scientists a training reference manual.
- 6. Neuman, W.L. (2008). Social research methods: Qualitative and quantitative approaches, Pearson Education
- 7. Best and Kahn, Research Methodology, PHI Limited.
- 8. Rand R. Wilcox Fundamentals of modern statistical methods.
- 9. Design of Experience: Statistical Principles of Research Design and Analysis, by Robert O. Kuehl Brooks/cole.

Kapilvastu, Siddharth Nagar (UP)- 272202

Proposed Course for VIII Semester -Botany Paper-II

Course Title: ENVIRONMENTAL AWARENESS AND ETHICS (For UG Honors & UG Honors

with Research)

Course Code: BOUC412

Credit Units: 04 Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

Course Objectives: To create awareness and

understanding among students regarding various environmental issues for achieving sustainable development goal.

Pre-requisites: Botany as major subject in previous year.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Pollution and waste management	15
Environmental pollution, Environmental protection laws, Regulatory framework for pollution monitoring and control. Bioremediation: Activated Sludge Process (ASP), Trickling filters Oxidation ponds, fluidized bed reactors, membrane bioreactor, and neutralization. ETP and sludge management: digesters, up flow anaerobic sludge blanket reactor, fixed film reactors, sequencing batch reactors, hybrid reactors and bioscrubbers.	
Unit II: Types of waste & Circular Economy	15
Waste: Types, collection and disposal. Recycling of solid wastes (hazardous & non-hazardous): classification, collection and segregation, incineration, pyrolysis and gasification, sanitary land filling, composting, biogas production. Concept of circular Economy & sustainability.	
Unit III: Environmental audit & Sustainability	15
Concept of environmental audit; Guidelines of environmental audit; Methodologies adopted along with some industrial case studies; Environmental standards: ISO 14000 series; Scheme of labeling of environment friendly products (Ecomark); Life cycle analysis; Concept of energy and green audit, Sustainability indices; Strategies and debates on sustainable development; Concept of Sustainable Agriculture; India's environment action programme: issues, approaches and initiatives towards Sustainability; Sustainable development in practice; Urbanization; Concept and characteristics of smart city; Urban resources and environmental	

problems; Carrying capacity analysis; Concept of ecological footprints.	
Unit IV: Environmental ethics, carbon credits and role of GIS	15
Carbon credit: concept, exchange of carbon credits. Carbon sequestration,	
importance, meaning and ways.	
Climate change, global warming, acid rain, ozone layer depletion, nuclear	
accidents and holocaust. Wasteland reclamation. Consumerism and waste	
products. Clean development mechanism.	
Geographical Information Systems: definitions and components; spatial and	
non-spatial data; GIS software packages; GPS survey, data import, processing,	
and mapping. Applications and case studies of remote sensing and GIS in land	
use planning, forest resources and agriculture studies.	

Course Outcomes: After the completion of the course the students will be able to understand the relationship of humans and environment and their moral obligation to protect the environment.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Kapilvastu, Siddharth Nagar (UP)- 272202

Proposed Course for VIII Semester -Botany

Course Title: PLANT SYSTEMATICS (For UG Honors & UG Honors with Research)

Course Code: BOUC413

Credit Units: 04

Level: UG

Credit Distribution of the course		
Lecture (L)	Tutorial (T)	Practical (P)
04	-	-

Course Objectives: To develop observation and

evolutionary analysis skill in the students with respect to angiosperms.

Pre-requisites: Botany as major subject in previous year.

Descriptors/Topics	Total no. of lectures/Teaching Hours (60)
Unit I: Significance of systematics and different classification systems of angiosperm	15
Principles of systematics, relevance and role of systematics; approaches to classification, phenetic, phylogenetic and cladistics. Relative merits and demerits of major systems of classification viz. Bentham and Hooker, Engler and Prantl, Hutchinson, Cronquist, Dahlgen and Thorne, APG system, Origin and Evolution of Angiosperms.	
Unit II: Herbarium techniques, botanical gardens and species concepts	15
Herbarium and Botanical Gardens. ICN (history, principles and applications), Protologue and Botanic literature (Monographs, icons, floras and taxonomic literature); Species Concept: various models; Speciation and Variation. Phytogeography with special reference to discontinuous areas, endemism, hotspots and hottest hotspots GIS and Phylocode.	
Unit III: Modern tools in plant systematics	15
Modern tools and evidence of taxonomy viz: morphology, anatomy, embryology, palynology, reproductive biology, cytotaxonomy, phytochemistry and ecology.	
Unit IV: Interrelationship between families	15
Sexual dioecism, Interesting taxonomic features and interrelationships of following dicot families: Ranunculaceae, Nymphaeaceae, Papaveraceae, Capparaceae, Caryophyllaceae, Malvaceae, Bombaceae, Tiliaceae, Fabaceae, Rosaceae, Passifloraceae, Cucurbitaceae, Cactaceae, Rubiaceae, Lamiaceae, Polygonaceae. Asteraceae, Primulaceae, Apocynaceae, Asclepiadaceae, Scrophulariaceae, Acanthaceae, Amaranathaceae, Euphorbiaceae, Casurinaceae, Aizoaceae. Special features of Insectivorous/Parasitic and Saprophytic families. Interesting taxonomic features and inter-relationships of following Monocot families and treatment of monocots in evolutionary systems of classification: Alismataceae, Arecaceae, Commelinaceae, Cyperaceae, Liliaceae, Orchidaceae, Poaceae, and Zingiberaceae.	

Course Outcomes: After the completion of the course the students will:

- 1. Able to observe, record, and employ plant morphological variation and the accompanying descriptive terminology.
- 2. Develop observational skills and field experience.
- 3. Comprehend the concepts of plant taxonomy and classification of angiosperms according to modern approaches.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Proposed Course for VIII Semester - Botany

Course Title: CONSERVATION BIOLOGY (For UG Honors only)

Course Code: BOUC414

Credit Units: 04 Level: UG

Course Objectives: To get an overview of the

of plant diversity, and strategies for its

exploration and conservation.

Credit Distribution of the course			
Lecture (L) Tutorial (T) Practical (P)			
04	-	-	

Pre-requisites: Botany as major subject in previous year.

Course Contents/Syllabus:

Descriptors/Topics	Total no. of
	lectures/Teaching
	Hours (60)
Unit I: Concepts of biodiversity and threats for biodiversity	15
Plant diversity concepts, importance of species diversity in ecosystems,	
Concept of diversity, biodiversity hotspots.	
Levels of Biodiversity - Ecosystem diversity, Species diversity and its	
measure (species richness, evenness, abundance and genetic diversity)	
Abiotic and biotic factors affect biodiversity, threats for biodiversity.	
Unit II: Biodiversity conservation, Red list, IUCN	15
Need for biodiversity conservation, types of conservation (preventive, remedial	
and restoration).	
Current status of biodiversity conservation and Red list index.	
Conservation status by IUCN red list categorized criteria.	
Community based conservation strategies.	
Indigenous and traditional knowledge in biodiversity conservation.	
Unit III: Approaches for biodiversity conservation	15
<i>In-situ</i> conservation - Protected areas and their types, Biosphere reserves,	
National parks, Wildlife sanctuaries and Sacred groves.	
Ex-situ conservation- Botanical gardens, Seed banks.	
<i>In-vitro</i> storage of germplasm and cryopreservation.	
Unit IV: Biodiversity policies and authorities	15
International and National conservation policies, Role of government agencies	
and NGOs in plant conservation.	
General account of important authorities and institutions - UNEP, DST,	
MoEF&CC, BSI, NBPGR, CPCB, NMPB, AYUSH.	

Course Outcomes: After the completion of the course the students will:

- 1. Develop an understanding about importance of protected areas.
- 2. Understand the role of government and non-government organizations in conservation of biodiversity.

Pedagogy for Course Delivery:

The course will be delivered in the form of lectures and discussions.

Assessment/Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Proposed Course for VIII Semester - Botany

Course Title: FIELD VISIT, REPORT WRITING AND PRESENTATION (For UG Honors

only & UG Honors with Research)

Course Code: BOUF415

Credit Units: 04 Level: UG

Credit Distribution of the course		
Lecture (L) Tutorial (T) Practical (P)		
-	-	04

Course Objectives: To obtain experience in

field exploration, sample collection, data collection, report writing including data presentation in seminars and symposium.

Pre-requisites: Botany as major subject in previous year.

Course Contents/Syllabus:

Activity	Weightage %
1. Field exploration tour to protected areas data collection on	25%
allotted/selected parameters and data analysis.	
2. Visit to NBRI/ CIMAP/ BSI, Allahabad/other National or State	25%
laboratories or Institutions present in adjoining areas.	
3. Power point presentation of data.	25%
4. Report writing and its submission.	25%

Course Outcomes: After the completion of the course the students will be able to design and conduct field exploration tour. They know the methodologies of data collection, data analysis and how to present data.

Pedagogy for Course Delivery: Field visit, expert guidance during field observation, data collection and data analysis.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Record Matrix	
To be filled by the Institution	
Date of Introduction of course:	July, 2025

SIDDHARTH UNIVERSITY Kapilvastu, Siddharth Nagar (UP)- 272202

Course for VIII Semester -Botany Paper

Course Title: RESEARCH PROJECT-PHASE-II (For UG Honors with Research)

Course Code: BOUP416

Credit Units: 4 Level: UG

Course Objectives: Development of research

potential/skills in students.

Credit Distribution of the course			
Lecture (L) Tutorial (T) Project			
04			

Pre-requisites: Botany as major subject in previous year.

Course Outcomes: Skilled students with research aptitude.

Pedagogy for Course Delivery:

The course will be delivered by allotment of research project and guidance by allotted supervisor/mentor.

Assessment/ Examination Scheme:

Evaluation scheme and mode will be as per the guidelines notified by the Siddharth University, Kapilvastu, Siddharth Nagar.

Record Matrix	
To be filled by the Institution	
Date of Introduction of course:	July, 2025
